

Getting Started Guide

Wireless Rollerball Mouse

Overview

- The wireless rollerball mouse is ideal for those with motor skills difficulties.
- The mouse works with a receiver unit that connects to the PC via USB cable.
- The mouse has a natural hand rest plus left and right and drag lock buttons.

Step by Step

1. The mouse communicates to the PC via the IT-receiver box that plugs into the PC via USB cable.
2. The wireless switch needs to be paired to the receiver; to do this press the pair button on the receiver.
3. Next, press the pair button on the underside of the mouse (under the battery compartment):

4. If you are experiencing problems with the rollerball working, check the receiver connection to the PC and that the mouse is paired to the receiver correctly. Also check that the battery doesn't need replacing.
