

Getting Started Guide

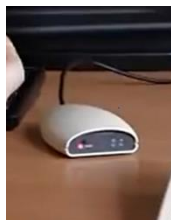

Big Wireless Switch

Overview

- The switch is light and easy to operate
- It is used with a wireless receiver that plugs into the PC with a USB cable
- Can be programmed to switch in place of any keyboard control.

Step by Step

1. The switch communicates to the PC via the IT-receiver box that plugs into the PC via USB cable:

2. The wireless switch needs to be paired to the receiver; to do this press the pair button on the receiver.
3. Next, press the pair button on the underside of the switch with a pen or cocktail stick:

4. Press the other button on the underside of the switch to change the keyboard control the switch activates.
5. To change the switch settings on individual games, remember to go into the "settings" or "options" menus of the games.
6. If you are experiencing problems with the switch working, check the receiver connection to the PC and that the switch is paired to the receiver correctly.
