

iPad Apps

A guide to the apps on your Lifelites iPad:

	App store – search and download more free and paid for apps for your iPad.		Music – purchase and download music from Apple music.
	Aumi – Music app that uses the camera to play musical notes by moving your head		Photobooth – weird and wonderful special effects using the camera.
	Beamz – Music app to make music with the Beamz controller or just use the iPad to make music of all genres.		Photos – view photos and video footage you have taken with the iPad camera.
	Big Bang Patterns – cause and effect patterns and music – use it with a switch.		Virtuoso Piano – Turn your iPad into a piano!
	Big Bang Pictures – cause and effect pictures and music - use it with a switch		Proloquo2go – powerful communication app with flexibility to adapt to variety of users and needs.
	Blippar – use this to scan our equipment training posters to access training materials and support.		Puffin Browser – An internet browser that allows you to view flash based websites – great for HelpKidzlearn and homework sites.
	Bloom – create sensory patterns and sounds by simply touching the screen.		Quiver – Augmented reality app – colour in pictures (print them at quivervision.com) and use the app to see them come alive!
	Camera – take photos and create videos using the camera on the iPad.		Quiver Fashion – fashion version of Quiver – see your own designs and models come alive on the catwalk.
	Cbeebies Playtime – play games with all your favourite cbeebies characters		Safari – iPads default internet browser. Use it to visit your favourite websites or browse the internet.

	Echostring – turn your iPad into a harp to create beautiful music!		Sensory Room – cause and effect animated story – works well with a switch.
	Fingerpaint with sounds – all the fun of finger painting without the mess! Sounds and music to go with each colour.		Settings – access to alter the setting on the iPad.
	Garage Band – be a master musician on a whole range of instruments and even play along to your favourite tunes		Thumbjam – music app that provides easy access to play a whole range of instruments using the touchscreen
	Gridplayer – communication grids to help communicate using symbols and pictures. Works with Grid3 on the PC if you have it.		Videos – Search, download and purchase videos, films and TV programmes.
	iMovie – edit video footage to create your own films and trailers		Awesome Xylophone – turn the iPad into a Xylophone!
	Magic Carpet – if you have a magic carpet this app will allow you to control and operate it.		

For more information on individual apps or on the iPad itself, check the getting started guides in the red folder, look at our resources online at www.lifelites.org/hospicestaff/learningresources or use the Blipper app on the iPad poster.

iPads -Setting up Guided Access

Guided access allows you to focus and direct a user to stay in a specific app or activity on the iPad.

Once set up and turned on the user cannot exit the app.

You can also choose parts of the screen to make unavailable so a user cannot click on adverts, change settings or exit the application.

To set up guided access:

1. Click on the settings icon
2. Go to "General" and then click on "Accessibility"
3. Scroll down the page to the section called "Learning" and click on "guided access" and slide the slider to on. Also enable the accessibility shortcut option if turned on
4. Open the application you want the user to use.
5. Tap and hold the Home button (the button on the bottom of the iPad below the touch screen)
6. Tap "guided access" from the accessibility options menu.
7. Draw a circle around any area of the screen you want to be disabled.
8. To disable the entire screen, tap off the touch option.
9. To set a time limit, select the option button under "Time limit", choose an amount of time and tap the time limit slider to green.
10. The machine button option will allow you to disable an area of the other button controls on the page such as the volume, sleep button, the motion sensor, any external keyboard attached to the iPad.
11. Once you have selected the options you need, click on start.
12. You will need to set a 4 digit passcode at this stage.
13. The guided access will be turned on now and you will see a dot in the bottom right hand corner and enter the passcode you have set to.
14. Click on "help" to read the guided access "tutorial" to get it back on again.

What if the iPad has been left in guided access on and I don't know the passcode?

1. Hold down the home button and the sleep/wake button on the top of the iPad together for about 10 seconds.
2. Repeat the steps.
3. Go back to the settings icon and tap guided access off on or again. Then you will be able to reset the guided access passcode.

Getting Started Guide

Step by Step

1. The iPad has a sleep/wake button on the top with a hand corner of the device. Click this once to awake or wake the iPad. To turn the device off completely, hold the button down, and then swipe the screen as directed. To restart the device hold the button down until the apple symbol appears on the screen.
2. To return to the home screen from any application click on the home button on the front of the device below the screen.

Overview

- iPad tablets are intuitive by design with touchscreens and visual interfaces.
- They also have a whole range of built in accessibility features such as VoiceOver (a screen reader) (a voice command option) and dilation features, guided screen options and assistive touch and switch control features.

Where to find more information

For further information on the iPad including how to use the assistive features go to <http://www.apple.com/uk/learnmore/ipad/>
