

Getting Started Guide

iMovie

Overview

- **iMovie is a brilliant movie making app for the iPad where you can produce a professional video presentation in minutes.**
- **It is great for collating still images, photos, screen shots and video clips into an electronic memory book.**

Step by Step

Start Up

1. Open up the iMovie app and click the icon that says create project.
2. Choose whether you want to make a movie or a trailer. Select Movie.
3. Select the still images or video clips you want to include. After that look at the bottom of your screen and click on create movie.
4. Add pictures and videos to it by clicking on the plus sign (+) on the top right hand corner. Make sure the media icon at the bottom of the screen is highlighted and select the media you want to add.

5. Then if you want to add sound effects, songs or theme music you need to click on audio at the bottom of your screen.
6. If you want to take a video, click on the little camera icon and to add a voice over press on the little microphone icon.

7. If you then want to go back one step (delete the last thing you did), the back icon is on the side in the middle.

8. To add in sub titles you can click on the video or image you want the subtitles to appear on and at the bottom will appear an option to put "Titles" on the slide. Choose the style and then type the titles onto the slide in the box provided.

9. To review what you have done look to the middle of the page - click the play button.

10. You can save your movie by pressing "Done", located at the top left hand corner of the screen.

11. To export your movie you can look at the bottom of the screen and see a little export icon, click on that and you can send it to people using other apps like text or email or just press save video to save to photos section of the iPad.
